Subject: HAZARDOUS WASTE GENERATED AT 891  
Author: Joe Anguiano at JULIET19  
Date: 8/4/98 8:59 AM

Waste Inspection has been requested to inspect filter press sludge generated at the Water Treatment facility, building 891. Inspection is concerned that the activity cannot be performed in accordance with 1-C80-WO-1102-WRT, Waste/Residue Traveler Instructions, which requires the recording of a RCRA Unit no. on the Traveler. The waste is not being generated in a RCRA waste management unit. The waste is identified by Water Treatment facility personnel to be CERCLA and is not required to be generated in a RCRA waste management unit. If this is true, a documented communication is required by Waste Inspection (Joe F. Anguiano) and Water Treatment Facility personnel (Russ Cirillo) prior to performing the waste inspection. This documented communication will be incorporated into the Traveler and referenced on the Travelers RCRA Unit No. line to justify not recording a RCRA Unit no..

Please respond ASAP to facilitate the completion of this job task.

Joe F. Anguiano
